

## SCRAP-IT® Launches EV Fleet Charging Program

For Immediate release  
February 24, 2023

**Vancouver, BC** – SCRAP-IT® is pleased to officially announce the launch of its EV Fleet Charging Program [www.evfleetcharging.ca](http://www.evfleetcharging.ca) and will be accepting applications from organizations across Western Canada.

The \$2.4M program will support Ultimate Recipients to install a notional target of 90 Level 2 chargers and 14 Fast Chargers in British Columbia, Alberta, Saskatchewan, and Manitoba for commercial and public fleets.

The EV Fleet Charging Program is a third-party delivery stream of the [Zero Emission Vehicle Infrastructure Program](#) and SCRAP-IT® thanks Natural Resources Canada for the opportunity to deliver this important initiative.

“For many years SCRAP-IT® provided substantial rebates towards the purchase of a new and used electric vehicles. It makes sense for us to support the implementation of electric vehicle infrastructure programs,” said SCRAP-IT® CEO, Diane Roberts. “For this initiative, we have partnered with Foreseeson Technology and ChargePoint to help streamline the sometimes-complicated process for our Ultimate Recipients.”

“We know that a key aspect of increasing clean energy vehicle adoption is building a charging network that will meet the needs of drivers today and in the future, so this initiative is one aspect of building that critical electric highway,” continued Roberts.

Determining [if your project qualifies](#), and [applying for funding](#) is easy. All program and qualification details can be found on their website at [www.evfleetcharging.ca](http://www.evfleetcharging.ca).

[SCRAP-IT®](#) is a not-for-profit Society based in Richmond, BC and delivers clean transportation programs across Western Canada.
